ICON OVERVIEW

Icons simplify or summarise an operation through a graphical representation – they directly represent an idea, concept or action and provide extra visual spark.

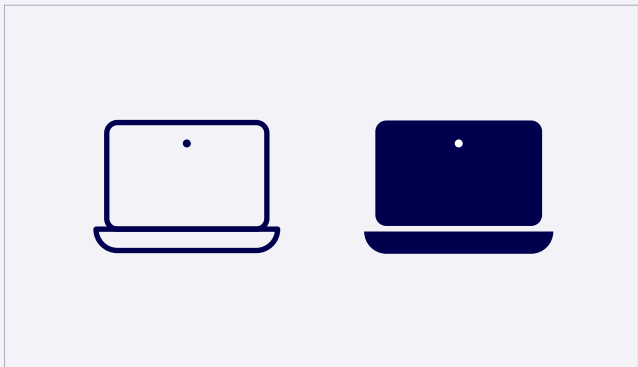

Each icon has an outline and fill version. Outlined icons work well for marketing collateral and presentations and filled versions work well at small sizes or to create a hover state.

STYLE

Our icons always appear in a single colour and it is recommended to use any one of our primary colours navy or white. This is to ensure clarity and legibility as they are normally places on busy backgrounds.

This icon style works on almost any background type, which makes this style versatile, easy to visualise, clear to understand and easy to scale.

ONE COLOUR

This icon style work on almost any background type, which make this style versatile, easy to visualise, clear to understand and easy to scale

CONSTRUCTION

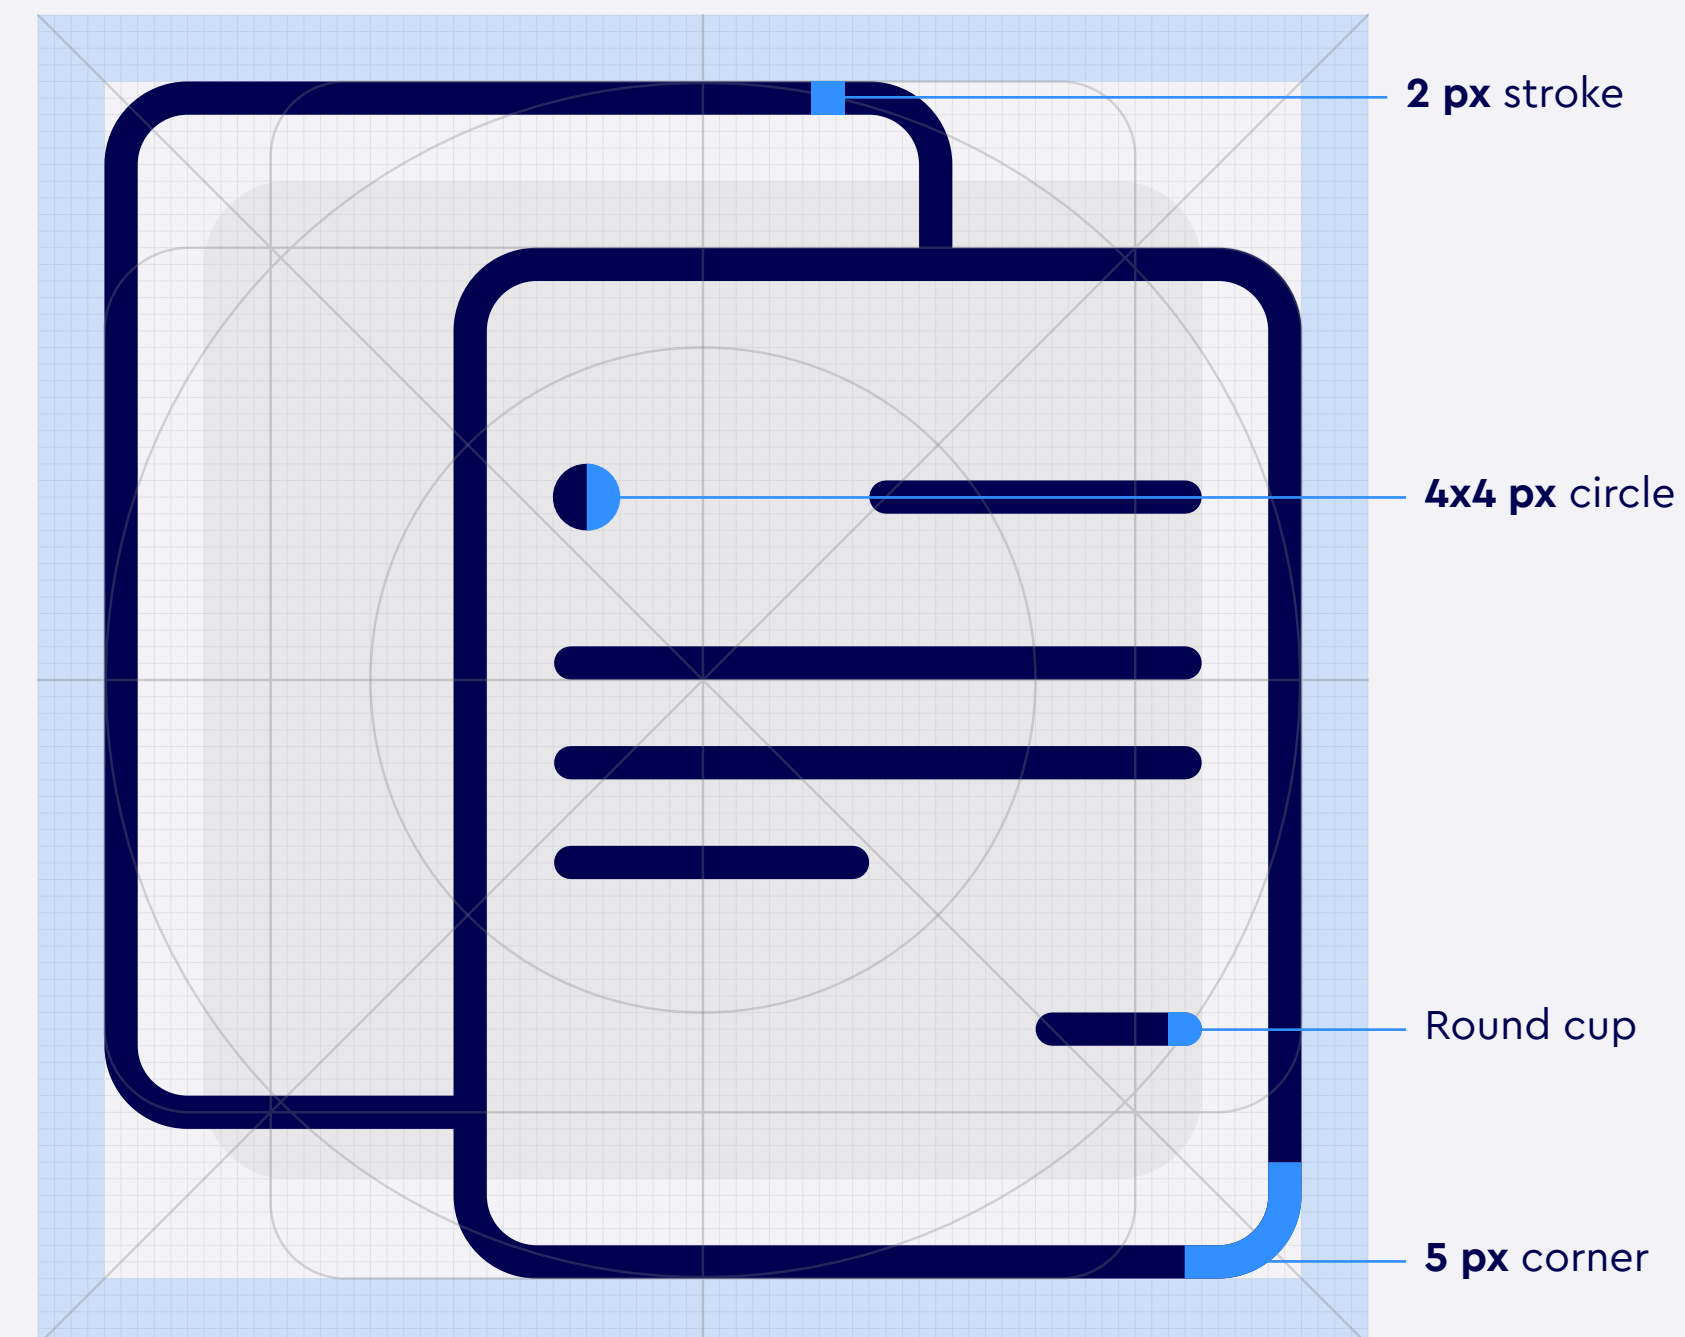

All icons should be drawn on a 80×80 px grid frame, with:

- 2 px stroke for outlines
- 2 px stroke negative space for filled
- rounded cup
- 5 px corner
- 4×4 px circle details

Stroke weight, corner size, brand colours, details and design elements need to be consistent.

Each icon includes 4 px padding on all sides as guidance. However, it's acceptable to go beyond the padding or off the key lines if doing so improves the optical balance of the icon.

We recommend positioning the icon structure 'on pixel' to avoid showing as much anti-aliasing (blurriness) as possible when rendered.

Outline - 80x80 px

SIZE VARIATIONS

Icons with too many details look blurry when resized.

To ensure readability and clarity at both large and small sizes we recommend creating every icon in three size variations: **32×32 px**, **64×64 px** and **128×128 px**.

Delete any unnecessary detail to get a clear and simple icon.

32x32 px

64x64 px

128x128 px

VISUAL WEIGHT

To maintain weight consistency, we recommend using these basic structures to guide based on basic shapes.

Circle*
58x58 px

Rectangle*
58x36 px

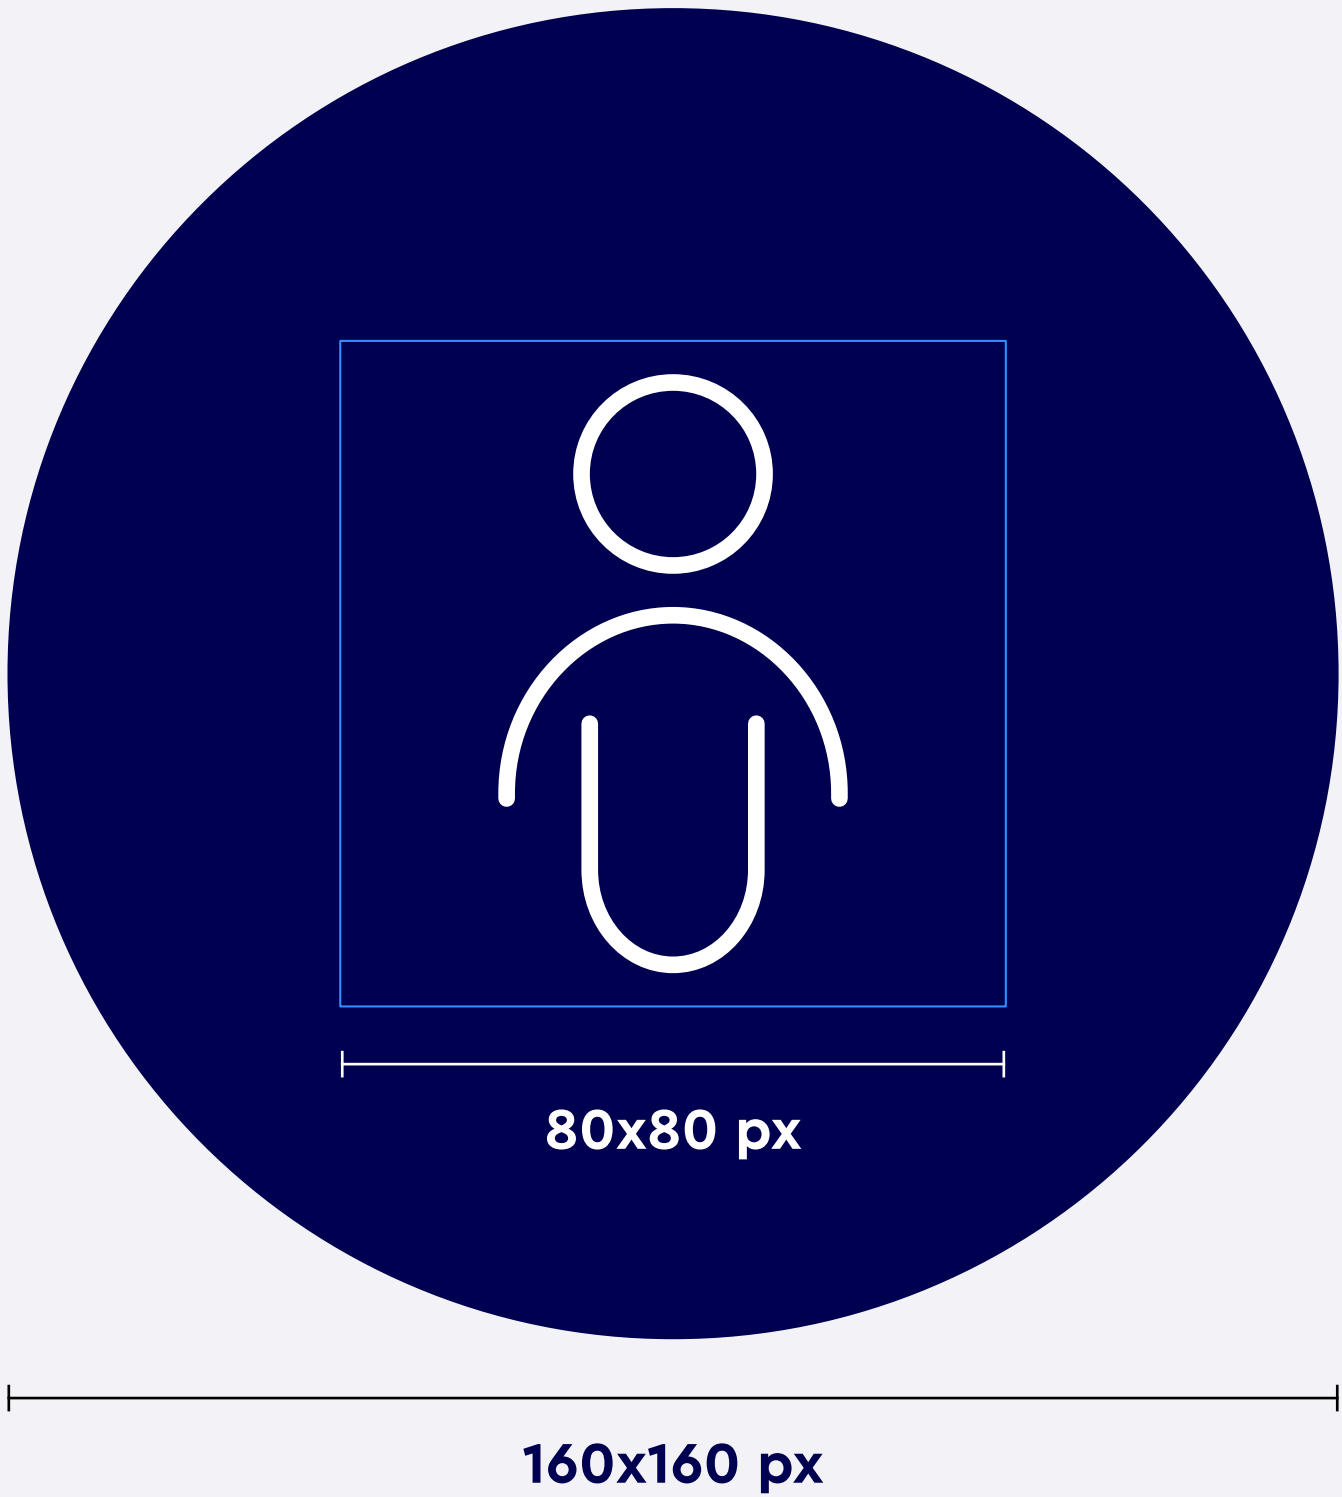

Square*
58x58 px

*Based on a **64x64 px** grid

CONTAINER

When the icon is contained inside a circle, the diameter of the container can be determined by doubling the width of the icon grid.

Icons should be centred in the container.
